

Module 1: Assignment 19 – str() Function

Problem Statement:

Use str() function to know about the different data types assigned to the columns of the dataset.

Tasks to be performed:

1. Find the structure of customer churn dataset using str() function and perform the following operations:
 - a. Convert the data type of internet service column from vector to character.
 - b. Convert the data type of partner column from vector to character.
 - c. Convert the data type of total charges column from num to int.
 2. Find the structure of the placement data.
 3. Find the structure of the pharmacovigilance data.
 4. Find the structure of city temperature dataset.
-
