

## Module 6: Assignment 1 - Splitting the Data Frame

## **Problem Statement:**

You work in XYZ Corporation as a Machine Learning Engineer. After finding out the Dependent and Independent Features of the data frames, now the corporation wants you to split the datasets into train and test sets so that you can feed those data to the logistic model.

## Tasks to be performed:

- 1. From the city\_temperature dataset, split the data frame into train and test sets.
  - a. Split the dataset into 70:30 ratio by the dependent feature.
- 2. From the Customer\_Churn, split the data frame into train and testsets.
  - a. Split the dataset into 80:20 ratio by the dependent feature.
- 3. From the Pharmacovigilance\_audit\_Data, split the data frame into train and test sets.
  - a. Split the dataset into 75:25 ratio by the dependent feature.
