Module 1: Assignment 17 – Tail Function

Problem Statement:

Sam is working on pharmacovigilance dataset. He has looked over first few values of the data and performed certain arithmetic operations. Now, Sam has to analyze and perform certain operations as a part of data analysis on the last few values of the dataset.

Tasks to be performed:

1. Extract the last few values of the following columns from the pharmacovigilance dataset:
    a. Ssc_p
    b. Hsc_p
    c. Degree_p
    d. Etest_p
    e. Mba_p
    f. Salary
2. Check an add 12000 to the last 8 values of the salary column.
3. Check and increase the mba_p score by 10 for the last few values.
